

— DATA ENTRY & DOCUMENT PROCESSING

Structured data, at enterprise scale.

Seventeen years converting unstructured paper, scanned images and forms into validated, delivery-ready data for banking, healthcare, insurance, retail, logistics and government programs across 27 countries.

Since 2008

Why enterprises outsource data entry & document processing

Every paper form, scanned image, PDF and legacy record an organization holds is a liability until it becomes clean, structured, searchable data. PRECISE BPO SOLUTION exists to close that gap at volume — turning inbound documents into validated records inside client systems, with the governance a regulated enterprise requires.

Time reclaimed

In-house teams spend 30-40% of operating hours on manual entry and re-keying rather than core work — capacity outsourcing returns directly to the P&L.

Error cost avoided

Manual single-pass entry commonly runs 1-4% error rates; downstream correction, re-work and compliance exposure cost far more than the original task.

Elastic capacity

Volume spikes — open enrollment, tax season, peak retail, loan origination cycles — are absorbed by a scalable bench instead of hiring and training cycles.

Risk transferred

Defined SLAs, layered QA and documented security protocols shift operational risk to a partner built specifically to carry it.

The engagement model in brief

Requirement analysis and a piloted sample review precede every production ramp. A dedicated, trained operator pool runs against documented SOPs, output passes through two internal QA layers plus random audit, and delivery is tracked against agreed SLAs with a named project manager as the single point of contact.

— ABOUT PRECISE BPO SOLUTION

Built for regulated, high-volume document work

PRECISE BPO SOLUTION is a Pune-headquartered business process outsourcing company specializing in data entry, document processing, data conversion and OCR-based capture. Founded in 2008, the company has grown into a 540+ person delivery organization serving clients across banking, healthcare, insurance, mortgage, retail, manufacturing, logistics and government sectors.

Accuracy first

Every workflow is designed backward from the client's required accuracy threshold, not forward from convenience.

Trained, dedicated teams

Operators are trained and assigned to specific client SOPs rather than rotated across unrelated projects.

Transparent partnership

Named project managers, agreed SLAs and open reporting — no black-box delivery.

Mission

Convert the world's unstructured documents into accurate, structured data that organizations can act on immediately.

Vision

To be the enterprise partner of record for document-heavy operations across regulated industries worldwide.

— OUR JOURNEY

2008

FOUNDED IN PUNE

Started as a specialist data entry operation serving regional financial and retail clients.

2013

DOCUMENT PROCESSING SCALE-UP

Added OCR-assisted capture and document digitization as core service lines.

2017

REGULATED-INDUSTRY FOCUS

Built dedicated workflows for mortgage, medical claims and insurance data with layered QA.

2021

GLOBAL DELIVERY FOOTPRINT

Expanded engagement to clients across 27+ countries with 24x5 delivery coverage.

Today

540+ PROFESSIONAL BENCH

Multi-service enterprise outsourcing partner spanning entry, conversion, cleansing and validation.

TEAMS ON DEMAND

COMPLIANCE POSTURE

• ISO 27001-Aligned Processes

• GDPR-Compliant Workflows

• HIPAA-Ready Workflows

Fast turnaround

Production ramps in days, not months, backed by a trained bench ready for redeployment across service lines.

Scalable teams

Capacity flexes with seasonal and cyclical volume without client-side hiring or training overhead.

Flexible engagement

Per-record, per-hour or dedicated-FTE pricing models structured around how each client actually operates.

Eight reasons enterprise procurement teams choose us

05
SECTION 04

Dedicated teams

Operators trained specifically on your SOPs, not shared across unrelated accounts.

Scalable delivery

Bench capacity expands and contracts with volume, without re-hiring cycles.

Flexible engagement

Per-record, per-hour, or dedicated-FTE models, structured to the work.

Secure operations

Role-based access, NDAs and controlled data handling on every engagement.

Project managers

A named point of contact owns delivery, escalation and reporting.

Quality assurance

Two-tier QA plus random audit built into every production line.

Transparent communication

Open status reporting rather than black-box delivery.

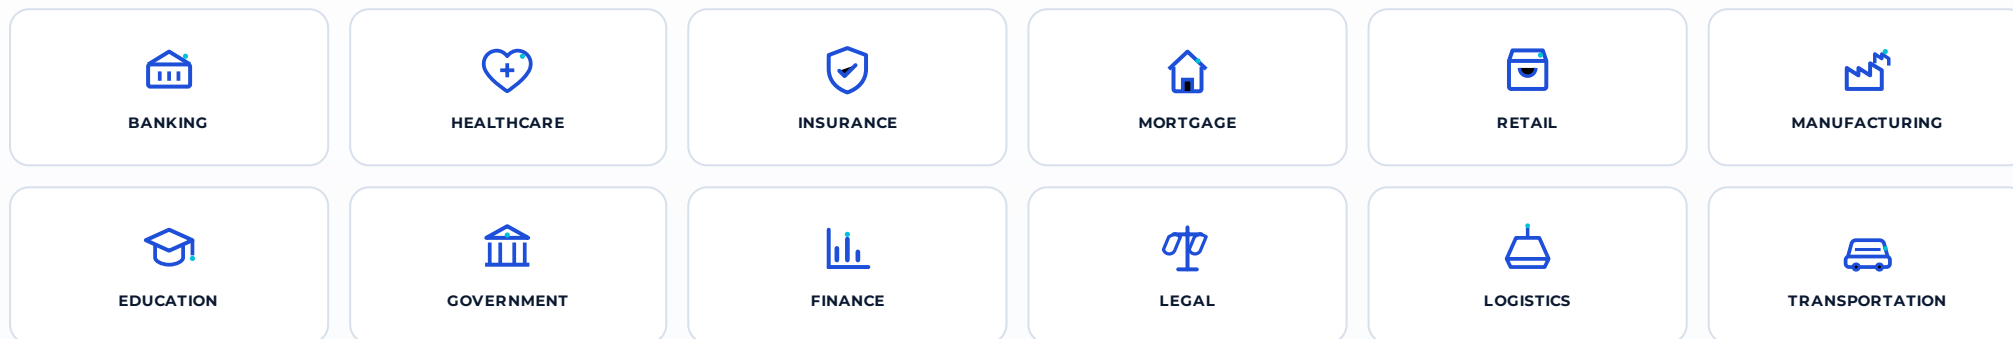

Fast turnaround

Production ramps in days against piloted, pre-agreed SLAs.

Twelve sectors, one delivery standard

Each sector carries its own documents, formats and compliance expectations. Workflows are configured per industry rather than run through a single generic process.

Twenty-three service lines, one delivery organization

	Online Data Entry	CORE SERVICE
	Mortgage Data Entry	FINANCIAL SERVICES
	Product Data Entry	RETAIL & ECOMMERCE
	Invoice Processing	FINANCE OPERATIONS
	Receipt Processing	FINANCE OPERATIONS
	Financial Data Entry	FINANCIAL SERVICES

Our end-to-end delivery workflow

A single, repeatable twelve-step process governs every engagement, from first requirement through to continuous improvement after delivery.

From scanned page to structured database

Optical character recognition accelerates capture, but every field still passes through human verification and rules-based validation before formatting and delivery.

Engines used

ABBYY, Tesseract and Adobe Acrobat-based capture, selected per document type and quality.

Human-in-the-loop

Every OCR pass is manually verified against source images before it is accepted.

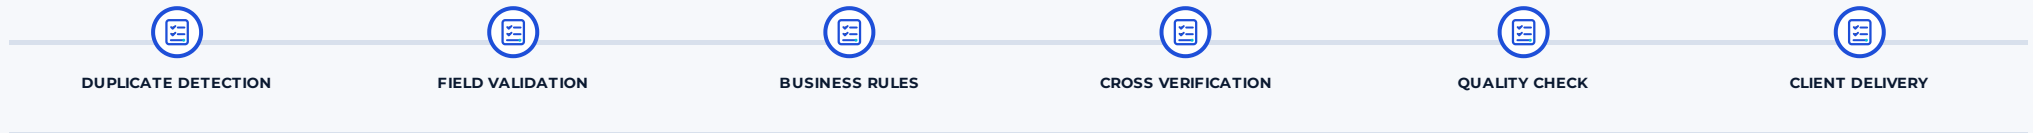

Rules-based validation

Field-level and cross-field checks catch what pattern recognition alone would miss.

Validation and cleansing, applied together

VALIDATION PIPELINE

BEFORE

- Duplicate records
- Incorrect formats
- Missing values

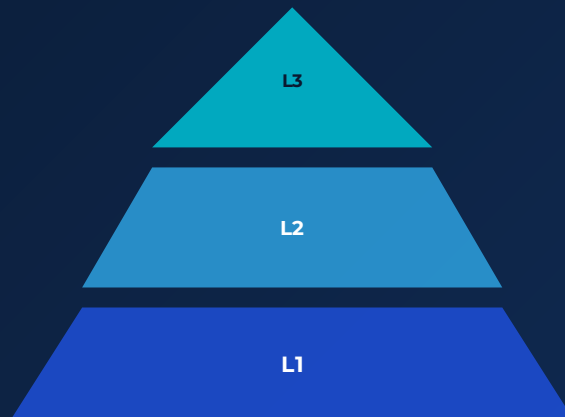

AFTER

- Deduplicated
- Validated
- Standardized
- Import-ready

Ready for import

Cleansed data lands directly in the client's target system — CRM, ERP, LOS or data warehouse — in the agreed schema.

A three-tier QA structure on every production line

LEVEL 3 — FINAL AUDIT

Independent, statistically-sampled audit ahead of delivery — the last gate before client handoff.

LEVEL 2 — QA TEAM

A dedicated QA team, separate from production, reviews output against SOPs and client rules.

LEVEL 1 — PRODUCTION TEAM

In-line self-checks and peer review built into the production process itself.

99%+
QUALITY TARGET

3
QA LAYERS PER RECORD

100%
BATCHES AUDIT-SAMPLED

Controls built around the sensitivity of the data

ISO 27001-Aligned Processes

Information security management aligned to ISO 27001 principles.

GDPR-Compliant Workflows

Data handling workflows aligned to GDPR requirements for EU personal data.

HIPAA-Ready Workflows

Processes structured to meet HIPAA handling expectations for health data.

Role-Based Access Controls

Access to client data is scoped to the individuals actually working the account.

Secure File Transfer

Encrypted transfer channels for all inbound and outbound data movement.

Confidential Data Handling

Documented handling procedures for sensitive and regulated data types.

NDA Available

Mutual non-disclosure agreements executed prior to any data exchange.

Audit Logs

Activity logging supports traceability across the production lifecycle.

Client-Specific Protocols

Security procedures configured per client requirement, not one-size-fits-all.

Controlled Data Access

Data is scoped, segmented and access-controlled at the project level.

Tooling selected per document, not one platform forced on all

OCR Engines

ABBYY, Tesseract

Document Tools

Adobe Acrobat

Spreadsheets

Excel, Google Sheets

Enterprise Systems

ERP, CRM

Client Software

Custom client platforms

Document Management

DMS integration

Technology is a means, not the message: engines and platforms are selected per document type and client environment, integrating with existing ERP, CRM and document management systems rather than requiring clients to adopt new infrastructure.

Anonymized case snapshots

Client identities are withheld per engagement confidentiality; the patterns below reflect representative work across sectors.

MORTGAGE

Regional lender

High-volume loan document indexing and data entry supporting origination throughput during a refinancing surge.

HEALTHCARE

Multi-clinic group

Medical claim data entry and validation feeding a claims-management platform across multiple facilities.

RETAIL

Online marketplace seller

Product data entry and catalog standardization across tens of thousands of SKUs for a growing storefront.

FINANCE

Mid-market lender

Financial statement and application data entry supporting underwriting turnaround targets.

LOGISTICS

Freight forwarder

Airway bill and bill-of-lading data capture standardized into a single shipment-tracking format.

Dedicated partner vs. building it in-house

DIMENSION	PRECISE BPO SOLUTION	TYPICAL IN-HOUSE BUILD
Ramp time	1-2 weeks	2-3+ months
QA structure	Three-tier, built-in	Ad hoc, self-managed
Volume flexibility	Elastic bench capacity	Fixed headcount
Security governance	Documented, aligned protocols	Varies by hire
Project management	Named PM included	Additional overhead
Cost structure	Per-record / per-hour / FTE options	Fixed salary + benefits

Dedicated teams

Not shared across unrelated accounts.

Enterprise QA

Three-tier review on every batch.

Flexible scaling

Capacity moves with your volume.

Long-term partnership

Built for renewal, not one-off delivery.

— LET'S TALK ABOUT YOUR DOCUMENT VOLUME

Ready when your next batch is.

Share a sample of your documents and target SLA — most engagements move from first conversation to a piloted sample within days.
